Update Concerning the Status of COVID-19 in Nevada

Kyra Morgan, MS, State Biostatistician

12/17/2020

Helping people. It's who we are and what we do.

(intentionally left blank, for printing)

COVID-19 By The Numbers

COVID-19 (Coronavirus) in Nevada

For questions, please contact the DHHS Office of Analytics by emailing data@dhhs.nv.gov.

Data are as of 12/16/2020

Current Status indicators are summarized below. Due to reporting delay, testing measures are considered over a 14-day period with a 7-day lag. This means that the most recent 7-day period is not included in the evaluation period to account for data completeness. Daily new cases and deaths are displayed as 14-day moving averages. Cases and deaths per 100,000 are displayed for the most recent 30-day period and cumulatively. In the maps below, counties with higher rates are shaded darker.

Cases

2,138

14-day rolling average
cases daily

2,074

cases per 100,000
over the last 30 days

194,098

cumulative cases

test positivity rate
over the last 14 days

1,885,929

cumulative tests

Nevada continues to observe increases in cases, hospitalizations, and deaths. Daily case are consistently double that of the summer peak. We are currently recording record numbers for daily deaths.

Although case growth appears to be stabilizing for the most recent short term, it is too early to conclude with certainty that we are approaching any kind of plateau. It is most likely that we have seen the entire direct affect of the Thanksgiving holiday come through in our case counts but have not seen the full impact on hospitalizations and deaths. We anticipate that we will see yet another increase following the Christmas holiday.

Regionally, Nevada's outbreak is now comparable to California in regards to new cases being diagnosed per capita. Arizona has started to outpace Nevada and California.

COVID-19 By The Numbers

Confirmed and Suspected Hospitalizations

Percent Change in Hospitalizations

Date	Confirmed	Confirmed + Suspected
12/15/2020	3.1%	0.8%
12/14/2020	-0.9%	-3.4%
12/13/2020	1.7%	7.6%
12/12/2020	5.3%	5.1%
12/11/2020	-2.0%	-3.9%
12/10/2020	0.3%	3.3%
12/9/2020	2.6%	0.8%
12/8/2020	3.6%	3.4%
12/7/2020	2.6%	1.7%
12/6/2020	0.5%	1.7%
12/5/2020	1.5%	-1.6%
12/4/2020	2.2%	5.7%
12/3/2020	6.5%	2.8%
12/2/2020	-2.7%	-0.5%
12/1/2020	4.4%	4.0%
11/30/2020	3.5%	2.8%
11/29/2020	2.4%	1.5%
11/28/2020	1.3%	4.8%

Confirmed Suspected

Confirmed and Suspected Intensive Care Unit (ICU) and Ventilator Utilization

Confirmed or Suspected COVID-19 in Intensive Care Unit (ICU) Confirmed or Suspected COVID-19 on Ventilator

Northern Nevada

Confirmed and Suspected Hospitalizations

Confirmed Suspected

Southern Nevada

Confirmed and Suspected Hospitalizations

Confirmed Suspected

There are currently 1,857 confirmed COVID-19 cases hospitalized in Nevada and an additional 151 suspected cases hospitalized. This is the second highest we have seen to-date. Although we have observed a slight reduction in slope of this curve, we continue to observe record levels. The most hospitalizations we have seen in a single day was recorded as recently as 12/13.

It is likely that we have not yet seen the full impact of hospitalizations stemming from the Thanksgiving holiday.

COVID-19 By The Numbers

14-Day Test Positivity Rate and WHO Goal by Specimen Collection Date

● WHO Goal ● 14-Day Test Positivity Rate (new)

20.7%

test positivity rate
over the last 14 days

Percent Change

Date	14-day Test Positivity Rate	Percent Change
12/15	20.7%	-0.6%
12/14	20.9%	-1.5%
12/13	21.2%	-0.7%
12/12	21.3%	-0.7%
12/11	21.5%	-0.1%
12/10	21.5%	-0.3%
12/09	21.6%	-1.1%
12/08	21.8%	0.8%
12/07	21.7%	1.1%
12/06	21.4%	1.6%
12/05	21.1%	1.5%
12/04	20.8%	1.9%

The current 14-day test positivity rate, at 20.7%, has declined since December 8th. This is the first time we have seen more than a single day of decline since September.

We believe this may be tied to having accounted for the bulk of testing associated with the Thanksgiving holiday; and while we may return to pre-holiday numbers, it is too early to associate this with a sustained downward trend.

At 20.7%, test positivity remains extremely high, continuing to imply wide community spread and potentially many more undiagnosed cases in the community.

COVID-19 Testing Turnaround

Median Time from Specimen Collection to Report, By County and Lab									
	CPL	LABCORP	NSPHL	Other	QUEST	RRMC	SOUTHERN	UMC	Total
Carson City	-	3	3	2	6	2	4	2	4

COVID-19 County Tracker

Data as of 12/07/2020

County Tracker: Nevada's counties are diverse in so many ways and have been impacted by COVID-19 differently. In order to ensure that each county is assessed for elevated disease transmission this tracker will be updated daily. Monday snapshots are used for discussion in COVID-19 Mitigation and Management Task Force meetings. A county is flagged for elevated disease transmission if it meets two of the three criteria:

- 1. Average number of tests per day (per 100,000) < 100.** The average number of molecular tests conducted in the most recent complete two week period in a county, divided by the number of people living in the county. This number is then multiplied by 100,000 to control for varying populations in counties. Due to reporting delay, this is reported over a 14-day period with a 7-day lag. Counties that average fewer than 100 tests per day will meet this criterion.
- 2. Cases (per 100,000) > 200.** The total number of cases diagnosed and reported over a 30-day period divided by the number of people living in the county. This number is then multiplied by 100,000 to control for varying populations in counties. Counties with a case rate greater than 200 per 100,000 will meet this criterion.
- 3. Cases (per 100,000) > 50 AND testing positivity > 8.0%.** The total number of positive molecular tests divided by the total number of molecular tests conducted. This number is then multiplied by 100 to get a percentage. Due to reporting delay (which may be different between positive and negative tests), this is reported over a 14-day period with a 7-day lag. Counties with a test positivity > 8.0% paired with case rate greater than 50 per 100,000 will meet this criterion.

Map shading is based on the number of criteria met. Hover your cursor over a county to display more data.

County	Average Number of Tests per Day per 100,000 (14-day average with 7-day lag)	Cases per 100,000 (last 30 days)	Test Positivity (14-day with 7-day lag)
Carson City	459	2,527	24.2%
Churchill	451	2,145	19.4%
Clark	439	1,723	17.3%
Douglas	203	1,221	27.3%
Elko	284	2,095	30.3%
Esmeralda	403	1,643	12.7%
Eureka	240	407	9.1%
Humboldt	300	2,913	38.5%
Lander	522	2,485	20.5%
Lincoln	60	923	63.6%
Lyon	189	1,081	22.0%
Mineral	983	2,960	15.0%
Nye	122	657	22.3%
Pershing	526	1,365	11.5%
Storey	118	112	5.4%
Washoe	430	2,310	21.2%
White Pine	623	2,031	17.7%

These data include prison cases. We can adjust this to exclude prisons upon request. A preliminary analysis was done, and results did change significantly for 5 counties, but not significant enough to bring them out of an elevated transmission status.

COVID-19 County Tracker

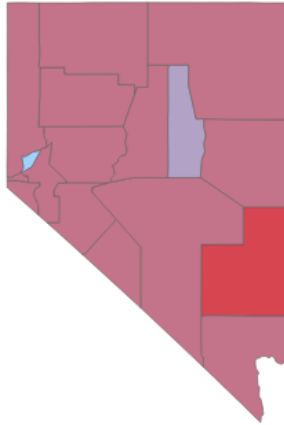

Data as of 12/14/2020

County Tracker: Nevada's counties are diverse in so many ways and have been impacted by COVID-19 differently. In order to ensure that each county is assessed for elevated disease transmission this tracker will be updated daily. Monday snapshots are used for discussion in COVID-19 Mitigation and Management Task Force meetings. **A county is flagged for elevated disease transmission if it meets two of the three criteria:**

1. Average number of tests per day (per 100,000) < 100. The average number of molecular tests conducted in the most recent complete two week period in a county, divided by the number of people living in the county. This number is then multiplied by 100,000 to control for varying populations in counties. Due to reporting delay, this is reported over a 14-day period with a 7-day lag. Counties that average fewer than 100 tests per day will meet this criterion.

2. Cases (per 100,000) > 200. The total number of cases diagnosed and reported over a 30-day period divided by the number of people living in the county. This number is then multiplied by 100,000 to control for varying populations in counties. Counties with a case rate greater than 200 per 100,000 will meet this criterion.

3. Cases (per 100,000) > 50 AND testing positivity > 8.0%. The total number of positive molecular tests divided by the total number of molecular tests conducted. This number is then multiplied by 100 to get a percentage. Due to reporting delay (which may be different between positive and negative tests), this is reported over a 14-day period with a 7-day lag. Counties with a test positivity > 8.0% paired with case rate greater than 50 per 100,000 will meet this criterion.

Map shading is based on the number of criteria met. Hover your cursor over a county to display more data.

County	Average Number of Tests per Day per 100,000 (14-day average with 7-day lag)	Cases per 100,000 (last 30 days)	Test Positivity (14-day with 7-day lag)
Carson City	458	3,102	28.4%
Churchill	391	2,218	20.7%
Clark	418	1,936	21.0%
Douglas	192	1,368	29.4%
Elko	306	2,099	28.6%
Esmeralda	440	2,259	30.0%
Eureka	302	560	6.0%
Humboldt	357	3,024	39.9%
Lander	529	2,785	23.6%
Lincoln	40	712	44.8%
Lyon	187	1,031	21.6%
Mineral	944	3,311	14.1%
Nye	116	835	29.9%
Pershing	589	3,706	37.1%
Storey	123	112	3.9%
Washoe	402	2,275	21.4%
White Pine	461	1,795	9.1%

These data include prison cases. We can adjust this to exclude prisons upon request. A preliminary analysis was done, and results did change significantly for 5 counties, but not significant enough to bring them out of an elevated transmission status.

Every county in Nevada, except for Eureka, and Storey Counties, is flagged for elevated transmission. As of more recent data, however, Eureka has subsequently been flagged again for elevated transmission.

*Average Number of Tests Per Day (per 100,000)

†Cases (per 100,000)

‡Total number of positive molecular tests divided by the total number of molecular tests conducted multiplied by 100.

Excluding prison/inmate populations do not significantly impact any counties' overall status for elevated disease transmission.

Counties that have relatively high increases in testing and case rates after excluding prison inmate populations are due to having few to zero COVID-19 positive inmates. Since the number of tests and/or cases remain relatively constant and the population size (denominator) is smaller without the inmate population, we would expect to see increases in testing and case rates.
